

Hunting Annular Pressure Relief System (APRS) Connection Technology | APRS

Features

- Patented technology
- Produced, tested and installed in accordance with Hunting's Total Quality Management processes and procedures
- Securely built into mechanical tubing
- Precisely calibrated to rupture at pre-selected pressure and temperature threshold at a pre-selected differential pressure

Benefits

- Cost-effective means for reducing potential casing collapse due to annular pressure buildup (APB)
- Ideal for deepwater casing strings where APB is a concern
- Custom applications and configurations available upon request

Hunting's APRS utilizes established "burst disc" technology to manage APB.

Proven extensively in deepwater applications worldwide, Hunting's APRS technology is an economical solution for preventing catastrophic structural well failure.
